

SBC Linear Range Launched in UK Market

Having achieved considerable success with precision ground and rolled ballscrews and machining spindles to the UK market, Jena Tec is pleased to announce its latest association representing SBC Linear Co. Ltd of Korea for the provision of high quality linear rail components and assemblies. An ideal partnership, Jena Tec is now stocking and distributing to its existing and new customers a complete range of linear motion components and assemblies including linear actuators, ballscrews, end supports, linear rails and spindles.

SBC are an established high quality Korean manufacturer of linear rail assemblies to the machine tool and automation industries. Including the C type caged ball design of carriage block for exceptional smooth running and noise reduction, additional designs are available with spacer balls for noise reduction and corrosion resistant Raydent coatings for hostile environments. Maintenance and lubrication becomes a forgotten topic with the SBC Self lube carriages utilising an impregnated fibrous media to retain lubrication within the carriage for the life of the rail.

Offering ex-stock availability of most sizes and ranges, SBC is an exciting new entrant to the UK market assisted ably by the Jena Tec team. For a high quality product offering competitive pricing and availability without compromising quality, the SBC range provides one of the best solutions in the market.
