Machining Spindles UHS Style

The UHS (Ultra High Speed) spindle series is used in high-speed internal grinding with speeds up to 250,000 rpm.

When designing this spindle type, the demand to offer a product with which our customers can achieve maximum quality and optimum productivity was taken as the basis.

This was realized particularly by the following features of the UHS spindles:

- Higher rigidity and larger grinding quill holder due to larger bore diameter of the front bearing
- Higher cutting speeds and thus higher efficiency due to higher speeds, larger grinding quill holders and larger tools
- Higher output with the same sleeve diameters and analogous speeds
- Synchronous motor instead of asynchronous motor
- ${}^{\bullet}$ Very high speed values n x d_{m} due to higher speeds and larger bearing diameters

GMN quality management – tested and approved

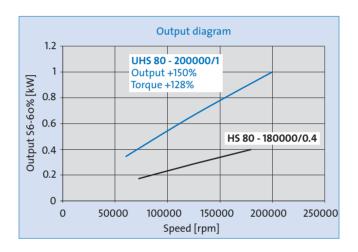

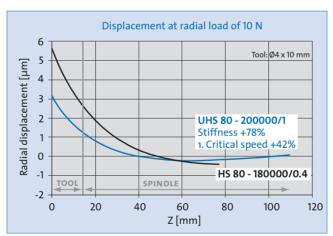

As a matter of course, we guarantee highest quality on the basis of long-term reliability also for the products of the UHS spindle series.

Here the comparison between a conventional spindle HS 80 - 180000/0.4 and the new spindle type UHS 80 - 200000/1.

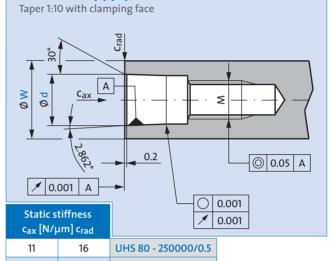

Designation	Speed n _{max} [rpm]	Output P _{S6-60%} [kW]	Frequency f _{max} [Hz]	Current Is6 [A]	Inverter Rated voltage [V]	Bearing-ø W1 [mm]	Tool interface	Inverter Type
UHS 80 - 250000/0.5	250,000	0.5	4167	3.5	230	10	U 6.5/10	SD 230-10
UHS 80 - 200000/1	200,000	1	3333	8.5	230	10	U 6.5/10	SD 230-20
UHS 80 - 120000/2	120,000	2	2000	8.5	230	17	U 9/16	SD 230-20
UHS 100 - 105000/4	105,000	4	1750	9	400	20	U 12/18	SD 480-23
UHS 100 - 90000/5	90,000	5	1500	11	400	25	U 16/23	SD 480-23

Per Tool interface U [d]/[W]

The SD inverter matched optimally to the operation of the UHS spindle and the appropriate lubricator PRELUB PP can be obtained from us.

The connection cables and lubricant pipes required for this belong to the standard scope of delivery.
